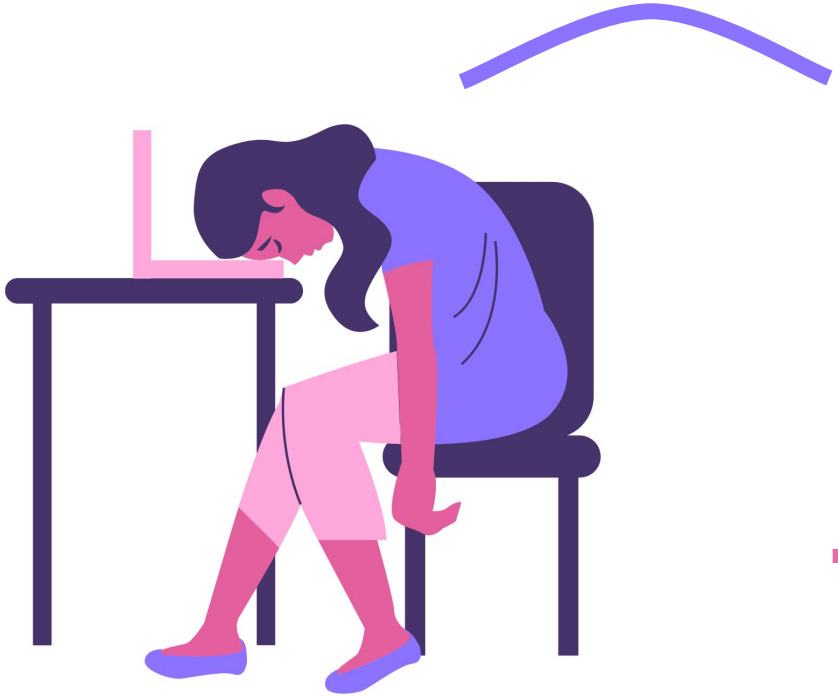
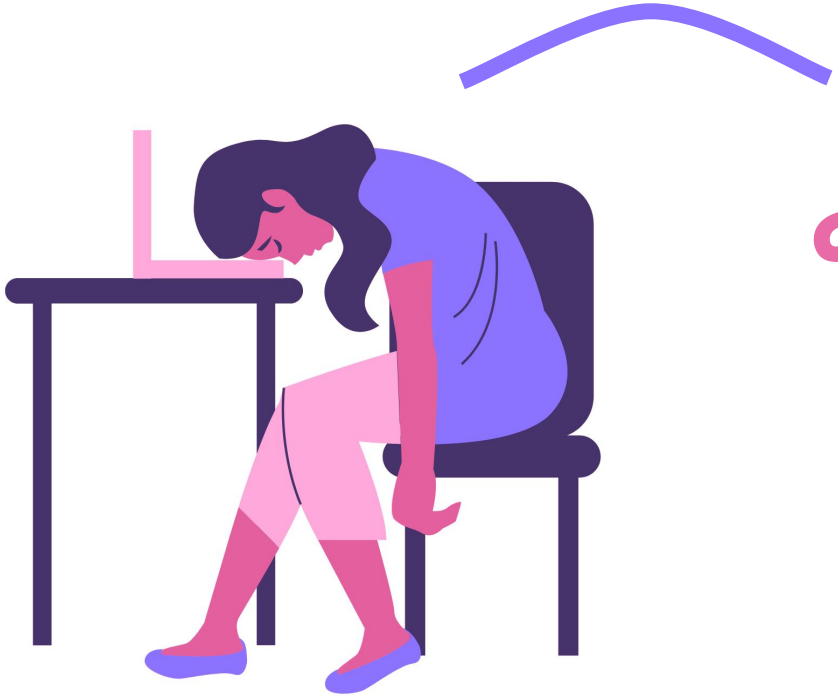
node JS



What if someone's already working on this?

How do I claim this issue?

What if I take too long and I'm blocking?



What if my PR's no good?

And then I never did anything.

Get excited and learn to build the web!

Rails Girls - Get started with tech

Our aim is to give tools and a community for women to understand technology and to build their ideas. We do this by providing a great experience on building things and by making technology more approachable.

Learn sketching, prototyping, basic programming and get introduced to the world of technology. Rails Girls was born in Finland, but is nowadays a global, non-profit volunteer community.

You are welcome to join! Contact us or follow us on Twitter .

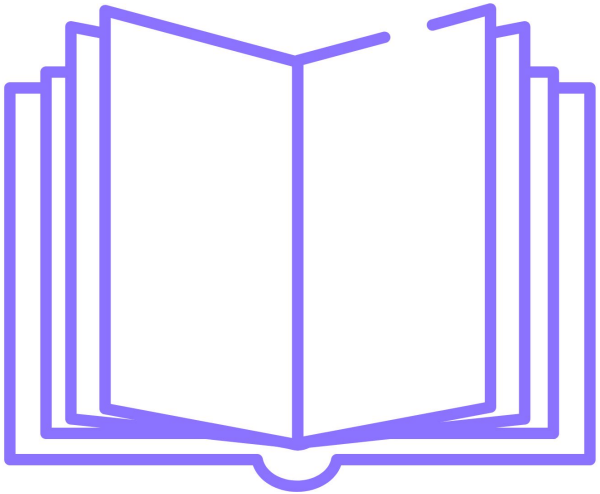
What are some types of non-code contributions?

Leveraging Your Skills!

Documentation



https://github.com/distributeaid/distributeaid.org/

Dev Setup

Install system dependencies:

- Node v14
- Yarn v1.22.5

Install project dependencies:

- `yarn`

Run the dev server:

- `yarn dev`

Finally, checkout the local site & GraphQL sandbox at:

- http://localhost:8000/
- http://localhost:8000/___graphql

Dev Notes

Crucial Commands

`yarn dev`

Run the project locally with live reload in development mode.

`yarn build`

Run a production build into `./public`. The result is ready to be put on any static hosting you prefer.

Updating data across multiple browser tabs using Vue.js and Vuex

Jan 15, 2020

What a start to the year! Let me set the stage: I'm in the process of building a cash register / point of sale system, which uses Vue.js and Vuex.

The purpose of the app is to enter food orders and print them to a receipt (a story for another time!)

However, when I deployed a physical unit, one immediate piece of feedback from hungry customers is that they'd like to see the order as the food items are being entered. Woops! Didn't think of that.

As luck might have it, the point of sale unit I was working on had a second display on the back side

CSS

CSS Container Queries

CSS Containment proporciona una nueva forma para aislar secciones de una página e indicarle al navegador que estas secciones son independientes del resto de la página en términos de estilos y disposición (*layout*).

Si estás creando un diseño responsivo, a menudo usas *media queries* para cambiar la disposición de la página con referencia al viewport. Es bastante

Issue Triage Guidelines

These guidelines serve as a primary document for triaging incoming issues to Kubernetes. SIGs and projects are encouraged to use this guidance as a starting point, and customize to address specific triaging needs.

Issue Triage: A Primer

Table of Contents

- Scope
- What Is Triaging?
- Why Is Triaging Beneficial?
- How to Triage: A Step-by-Step Flow
  - Triage-Related Tools
    - Permissions and the Bot
    - Gubernator
    - Triage Party
    - GitHub Project Boards
    - DevStats
  - Process Pointers and Advice from SIGs
    - Running a Triage Meeting: Tips from api-machinery
    - Triage Guide by cluster-lifecycle

Solid 💪

I added some small comments here and there. I think it would be a good opportunity to also clean up and remove some

I faced this issue too, but with .net core 2.1. I'm not sure why it's working but, If this solution is available for you then try the following:

1. Restart Docker Desktop (This solution is offered in the output window)
2. Change the docker file.

I replaced this

```
FROM mcr.microsoft.com/dotnet/runtime:2.1 AS base
WORKDIR /app

FROM mcr.microsoft.com/dotnet/sdk:2.1 AS build
WORKDIR /src
```

to

```
FROM mcr.microsoft.com/dotnet/core/runtime:2.1-alpine AS base
WORKDIR /app

FROM mcr.microsoft.com/dotnet/core/sdk:2.1-alpine AS build
WORKDIR /src
```

Then debug started to work fine even after changing the docker file to start variant, including stops on breakpoints. And my configuration has one additional difference: I use Debug argument in the docker file and use Debug in Solution configuration

```
RUN dotnet build "DebugLinux.csproj" -c Debug -o /app/build
```
