Get excited and learn to build the web!

Rails Girls - Get started with tech

Our aim is to give tools and a community for women to understand technology and to build their ideas. We do this by providing a great experience on building things and by making technology more approachable.

Learn sketching, prototyping, basic programming and get introduced to the world of technology. Rails Girls was born in Finland, but is nowadays a global, non-profit volunteer community.

You are welcome to join! Contact us or follow us on Twitter .

freeCodeCamp.org's open-source codebase and curriculum

freeCodeCamp.org is a friendly community where you can learn to code for free. It is run by a donor-supported 501(c)(3) nonprofit to help millions of busy adults transition into tech. Our community has already helped more than 40,000 people get their first developer job.

Our full-stack web development and machine learning curriculum is completely free and self-paced. We have thousands of interactive coding challenges to help you expand your skills.

Table of Contents

- Certifications

- Reporting Bugs and Issues
- Reporting Security Issues and Responsible Disclosure
- Contributing

So let's talk about Non-Code Contributions

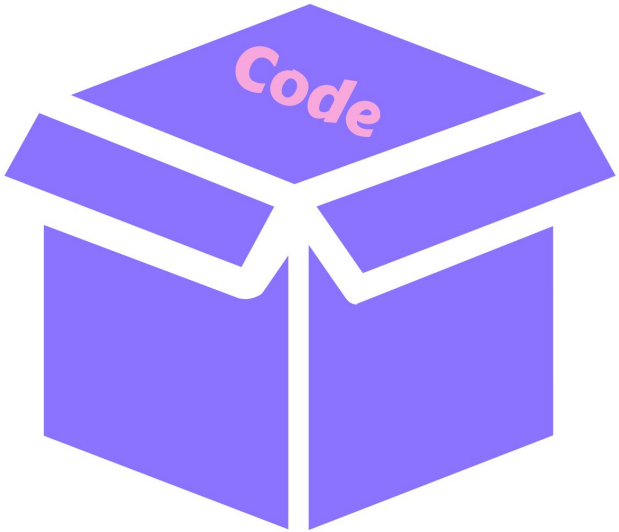
Any contributions that don't involve writing code.

They're amazing, they're essential, and I recommend doing them

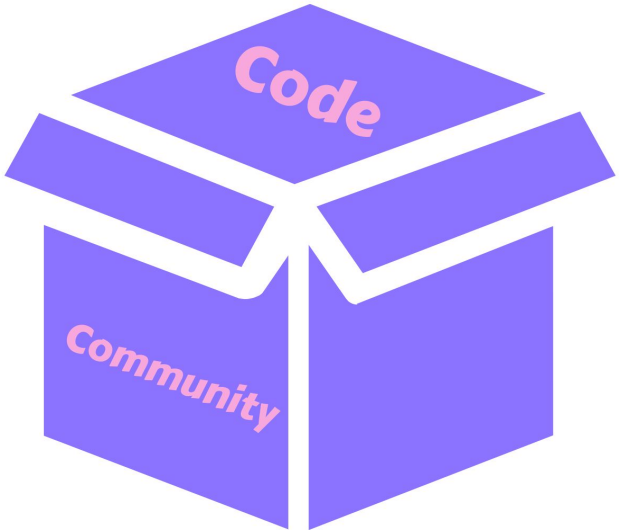
But why?

I can just write code!

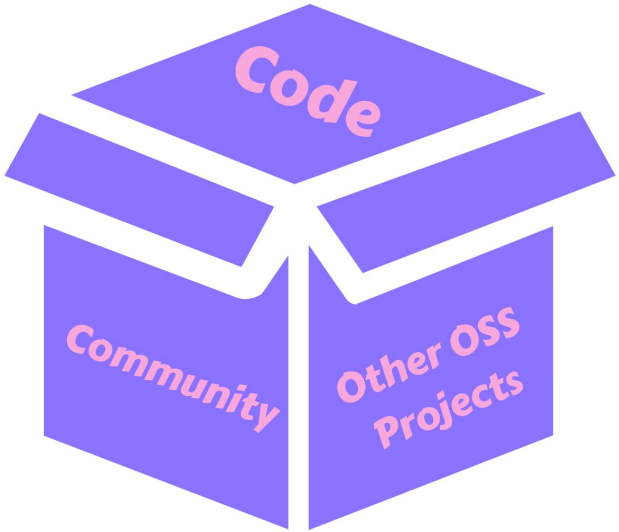
There's more to Open Source than Code



Code



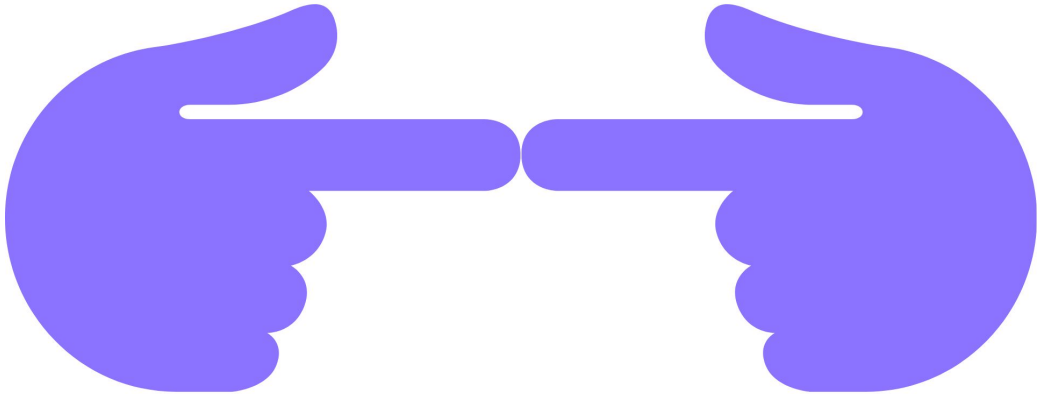
Code
Community



Code
Community
Other OSS Projects

No really, why?

Getting out of the comfort zone



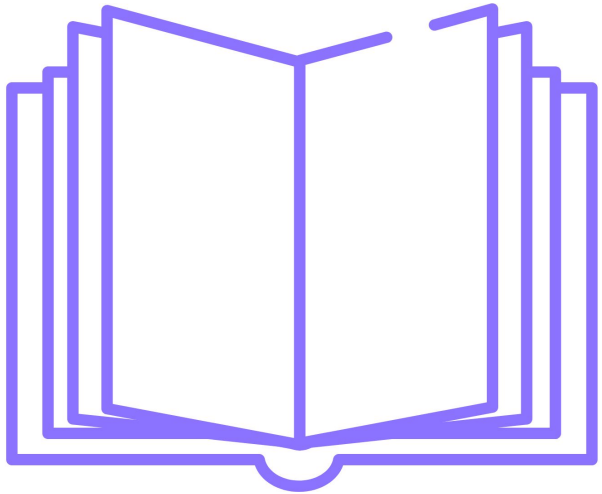
Helping a Project Thrive

Meeting Fellow Members

Improving Onboarding

What are some types of non-code contributions?

Documentation



https://github.com/distributeaid/distributeaid.org/

Dev Setup

Install system dependencies:

- Node v14
- Yarn v1.22.5

Install project dependencies:

- `yarn`

Run the dev server:

- `yarn dev`

Finally, checkout the local site & GraphQL sandbox at:

- http://localhost:8000/
- http://localhost:8000/___graphql

Dev Notes

Crucial Commands

`yarn dev`

Run the project locally with live reload in development mode.

`yarn build`

Run a production build into `./public`. The result is ready to be put on any static hosting you prefer.

https://contribute.freecodecamp.org/

Contribute to freeCodeCamp.org

This community is possible thanks to thousands of kind volunteers like you.

Here are some quick and fun ways you can help the community.

- Help by answering coding questions on our community forum.
- Give feedback on coding projects built by campers.
- Help us translate freeCodeCamp.org's resources.
- Contribute to our open source codebase on GitHub.

Let's make our first Rails app

Jun 9, 2015

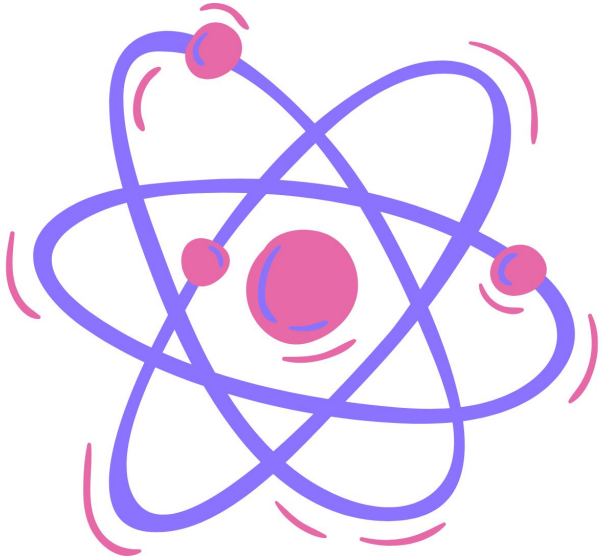
Welcome! If you're here, you'd like to learn to make Rails web apps. I'd love to take you through making the quintessential "To-do" list.

Ingredients

- 1 computer
- 1 Terminal or Command Line Prompt
- 1 installation of Ruby and(on) Rails
- 1 text editor
- 1 happy coder

Recipe

Trying stuff out



```
standard_init_linux.go:228: exec user process caused: no such file or directory
Error: failed to BuildWithToolchain: failed to dockerBuildForDirectory: failed to Run docker com
mand: failed to Run command:
exit status 1
```

Solid 💪

I added some small comments here and there. I think it would be a good opportunity to also clean up and remove some

I faced this issue too, but with .net core 2.1. I'm not sure why it's working but, If this solution is available for you then try the following:

1. Restart Docker Desktop (This solution is offered in the output window)
2. Change the docker file.

I replaced this

```
FROM mcr.microsoft.com/dotnet/runtime:2.1 AS base
WORKDIR /app

FROM mcr.microsoft.com/dotnet/sdk:2.1 AS build
WORKDIR /src
```

to

```
FROM mcr.microsoft.com/dotnet/core/runtime:2.1-alpine AS base
WORKDIR /app

FROM mcr.microsoft.com/dotnet/core/sdk:2.1-alpine AS build
WORKDIR /src
```

Then debug started to work fine even after changing the docker file to start variant, including stops on breakpoints. And my configuration has one additional difference: I use Debug argument in the docker file and use Debug in Solution configuration

```
RUN dotnet build "DebugLinux.csproj" -c Debug -o /app/build
```
